

## Specification for the migration of legacy data to the Data Futures data model.

### Migration.StudentCourseSession.Course.CurriculumAccreditation

Version 0.3.1: Revision history at foot of document

#### Overview

This document provides the specification for the migration of legacy data into the Data Futures entity Course.CurriculumAccreditation, related to StudentCourseSession.

This is one of a series of specifications produced to translate or map legacy data submitted against the CXX051/54 collections into the Data Futures data model (056). The data migration activity will allow quality assurance checks to be run on the first Data Futures collection in 2022/23 for data submitted by providers.

#### Entities covered in this specification

Entity name	Entity description
<b>Migration.StudentCourseSession.Course.CurriculumAccreditation</b>	Provides information on accreditations applicable to the Course.

**Migration.StudentCourseSession.Course.CurriculumAccreditation** - This sub-entity of StudentCourseSession.Course records where the Course has an accreditation. Each course could have multiple accreditations, these will be created as separate entries in the accreditation entity. In cases where migration results in duplicate codes, only one entry will be kept i.e. multiple CURACCIDs with the same code will not be duplicated.

These entities are only created for students within the migrated population (see Z\_POPMIGRATION). This applies to both the Student record (051) and the Student Alternative record (054).

#### Depend upon fields

- Provider.XINSTCOU01
- Course.COURSEAIM
- Course.REGBODY
- Course.TQSSEC

### Additional information

Student course sessions are created from the student instances (including duplicated instances) from the Student record and combined instance periods from the Student Alternative record. The migration population document specifies how these have been created. Since session years are created for each Student course session (except for postgraduate research students), they can be identified by the unique combination of student identifier, HE provider identifier, instance identifier and Student course session identifier. The session year identifier is therefore set to the same as the Student course session identifier.

Student course session information has been taken from the year in which the instance (Student record) or combined instance period (Student Alternative record) is taken from.

For duplicated instances which start prior to 1 August 2019 and continue into the next academic year, information relating to the course is taken from the previous collection year, except where it was used to create the Student course sessions (MODE, TYPEYR, LOCSDY, NOTACT, COMDATE and ENDDATE).

Where a combined instance period spans two collection years, the information is taken from the latest collection. A complete mapping of Student course sessions was not possible due to insufficient detail in legacy collection.

Where labels, codes or granularity differ for a migrated field, a value mapping table is provided following the Field mapping table below.

Please be aware that whilst field labels may be the same for legacy and Data Futures, the coverage may differ. The Data Dictionary within the Data Specification provides full lists of Data Futures valid entries and coverage of the data.

### Field mapping

Data Futures field	Data Futures field	Legacy field(s)	Applicable to	Migrated?	Direct mapping?
CURACCID	Accreditation identifier	COURSEAIM, REGBODY1, REGBODY2, TQSSEC	051, 054	Y	N
VALIDFROM	Accreditation valid from date			N	
VALIDTO	Accreditation valid to date			N	

## Value mapping tables

For those fields which have been migrated but are not a direct mapping (i.e., labels, codes or granularity differ), tables listing the mapping of the valid values are provided below.

Legacy values which have not been mapped are still listed, marked 'Not mapped'.

### 1:1 code mapping

#### 1:1 code mapping is 'Y':

There is only **one** legacy code mapped to **one** 056 code. In some cases, the codes will be the same, e.g. Student.SDEPEND in legacy 01 maps to 01 in Migration.Student.STUDEP. In others they are different codes, Student.ETHNIC '22' maps to '120'. Similarly, the labels may remain the same or differ.

Even for 1:1 code mappings, if the label differs substantially between legacy and 056, the migrated data label will account for both labels to avoid any misinterpretation, particularly for personal characteristic fields e.g. if Legacy 99 'Not known' is a 1:1 mapping to 99 'Not available', then the migrated data label may state 'Not available/ Not known'.

As an exception to this, where 'Information refused' is mapped to 'Prefer not to say', the migration label will state only 'Prefer not to say'.

#### 1:1 code mapping is 'N':

This can be a result of legacy codes either being combined in an 056 code, or split across multiple 056 codes depending on additional fields e.g. some ethnicity codes differ by the provider country and so have been mapped to separate 056 codes accordingly.

As with the 1:1 code mappings, if the label differs substantially between Legacy and 056, the migrated data label will account for both labels to avoid any misinterpretation, particularly for personal characteristic fields.

#### 1:1 code mapping is 'N/A':

This notation is used where the code is new for Data Futures (056) and has no legacy equivalent. These codes are only listed for completeness. Although the new codes should not appear in Migrated data, the 056 code and label values are still listed within the Migrated columns and the 056 label column is marked 'New code'.

## Accreditation identifier

Create an entry in the migrated accreditation entity for each of the following criteria which is satisfied. Where multiple criteria are satisfied, multiple entries will be created. Where none of the clauses are satisfied, no accreditation entity is produced. In cases where migration results in duplicate codes, only one entry will be kept i.e. multiple CURACCIDs with the same code will not be duplicated.

The accreditation entity migrated data comes from three different sources in the legacy data; Course aims (051 and 054), Regulatory bodies (051 and 054) and Teaching quality sought sector (051 only).

The tables below are split by source legacy field. Data Futures (056) codes may incorporate multiple codes from one legacy field, but there is no overlap of mappings from different source fields. e.g. Data Futures CURACCID values in the COURSEAIM value mapping table will not appear in the REGBODY or TQSSEC mappings.

#### Revision history

2022-01-26 0.1.0 Updated to create a separate accreditation entry for each separate criteria, rather than using a top down approach.

2022-02-10 0.2.0 Restructure of value mapping tables to remove colour coding, additional content to describe new tables. References to SR and SAR changed to 051 and 054 respectively. Text updated to reflect process for de-duplication. Mapping of Regulatory body 1 and 2 to account for new ACCREDITATIONIDs 02202, 11109 and 06921. Code 06914 removed and 13001 added.

2022-02-23 0.3.0 Links to coding manual updated to 21056, 20051 and 20054. Typo corrected for code 6909 updated to 06909. Legacy code 09 added to mapping.

2022-07-19 0.3.1 Introduction text updated to highlight that migrated data supplied in the HESA data platform will on a per entity basis and not combined. Hyperlink and reference to coding manual removed under 'Additional information'. Field name update: ACCREDITATIONID to CURACCID.
